

# IBSuite is Cloud-Native and True Software as a Service

IBSuite is designed as always-on, a true native cloud solution. The underlying technology is constantly kept up-to-date, improved, exchanged, enhanced etc. All, to ensure that IBSuite runs on new, proven technology with no dependencies for the customers to manage - and no technical debt. Everything is API based and the underlying implementation is encapsulated by APIs and processes that the customers access. There are no dependencies to hardware/software providers for the customer to manage/handle.

IBSuite is fully underpinned by Amazon Web Services (AWS), thus enabling IBSuite to be resilient, secure, robust, high-performing, durable and highly scalable at any given point in time.

## Backwards Compatible and 0-downtime

IBA is Advanced Technology Partner with Amazon Web Services.

IBSuite is always up-to-date. With monthly seamless upgrades you will never miss out on a new feature or an enhancement to platform. IBA both ensures and enforces full secure backwards compatibility at any given point in time.

# INSURANCE BUSINESS APPLICATIONS

THE PROVEN, NEXT-GENERATION  
CLOUD INSURANCE PLATFORM
